

Introducing... AquaBundance

The Year-Round Aquaponic Gardening System

Year-round, organic, low stress gardening is finally here. AquaBundance is the world's first green gardening system that has been designed to grow plants and fish, year-round, both indoors and out. AquaBundance is a highly productive aquaponic system that grows a nearly boundless variety of plants using organic nutrients supplied by fish growing in an attractive adjoining tank.

Imagine, waist-high container gardening without weeds or back strain that automatically waters and fertilizes itself and takes only minutes a day. All while using a fraction of the water of a dirt-based gardening system.

Imagine growing your own tilapia, perch, or Koi

Imagine enjoying all this year-round, indoors and out

The AquaBundance System ... Gardening Re-Imagined

Designed for Aquaponics

- 60-gallon Fish Tank to grow full-size edible fish.
- 12" deep Grow Bed with Media Blocker for easy maintenance.
- Tank plumbing designed for maximum aeration for healthy fish.
- Expandable to a larger fish tank.

Designed for Year-Round Gardening

- No width greater than 28" – fits through all exterior doorways.
- Handles and castors on the table, and handles on the fish tank for easy lifting and transporting.
- 8 square feet of plant growing space.

Designed for Durability

- Rotomolded, UV protected, food-safe plastic – will not bow with heat and weight.
- 2", 12-gauge, powder-coated square steel tubing.
- Furniture grade PVC won't break down in outdoor heat.

Designed for the Home

- Elegant Asian look.
- 4 Colors – Charcoal, Terra Cotta, Grey Granite and Sand Granite.
- Furniture grade, high-gloss PVC in decorator colors.

"I am very interested in your system coming out in June. My wife and I are just getting into Aquaponics as we are both disabled and have trouble getting down to garden... so Aquaponics looks like the thing for us."

~ Harrison Griffith, FL

What is Aquaponics?

Aquaponics is the marriage of aquaculture (*raising fish*) and hydroponics (*the soil-less growing of plants*). This exciting new technology grows fish and plants together in one integrated system. The fish waste provides organic food for the growing plants and the plants naturally filter the water in which the fish live.

The Benefits of Aquaponic Gardening

- Enables home fish farming. You can now feel good about eating fish again.
- Uses 90% less water than soil-based gardening.
- Is twice as productive on a square foot basis as soil-based gardening.
- Is free from weeds, watering and fertilizing concerns, and because it is done at a waist high level there is no back strain.
- Is necessarily organic. Natural fish waste provides all the food the plants need. Pesticides would be harmful to the fish. Hormones, antibiotics, and other fish additives would be harmful to the plants. And the result is every bit as flavorful as soil-based organic produce, with the added benefit of fresh fish for a safe, healthy source of protein.
- Consumes no energy to transport out-of-season produce to distant markets across the globe because you will be able to select your own produce from the garden right in your own home. A fun, healthy, and delicious way to reduce your carbon footprint!
